Breedx Tomato Varieties

ToMV - Tomato mosaic virus 0-2

Pf - Leaf mold (*Cladosporium fulvum*) A-E

Fol - Fusarium wilt 0,1

Va/Vd - Verticillium wilt

Sl - Stemphylium lycopersici

HR= High resistance plant varieties that highly restrict growth and development of the specified pest or pathogen under normal pest or pathogen pressure when compared to susceptible varieties. These plant varieties may, however, exhibit some symptoms or damage under heavy pest or pathogen pressure.

ToBRFV - Tomato brown rugose fruit virus

TYLCV - Tomato yellow leaf curl virus

TSWV - Tomato spotted wilt virus

Ma/Mi/Mj - Nematodes

IR= Moderate/intermediate resistance plant varieties that restrict the growth and development of the specified pest or pathogen but may exhibit a greater range of symptoms or damage compared to high/standard resistant varieties.

* Ask us about our GSPP certified Tomato seeds

Breedx will release product catalogues, technical specifications and growing recommendations for its varieties from time to time. These recommendations constitute a "recommendations only" and are non-binding. The growers must exercise their own skills, experience, care and judgement and consider local growing conditions when producing the crop.
